10. Transport & Handling	23

2. INTRO TO KAELO

Kaelo was designed so you can enjoy that first perfectly chilled sip for the whole bottle.

From morning to night, water to wine, *Kaelo* keeps drinks chilled and every sip at the perfect temperature. It can be integrated into any surface, and comes with the choice of three styles: Curved, Flush or Undermount.

1. INSIDE THE BOX

1.1 BASE UNIT BOX:

*Kaelo or
Kaelo Plus*

Power Adapter

1.2 CROWN BOX: CURVED

Curved Crown

Rubber Mat

1.3 CROWN BOX: FLUSH

Flush Crown

Rubber Mat

1.4 CROWN BOX: UNDERMOUNT

Undermount Crown

Rubber Mat

Locking Ring attached to Alignment Template

Screws

Alignment Template

Gasket

3. DESIGN ALLOWANCE

When designing with *Kaelo*, all that's required is the specification of a hole, an accessible power socket and, depending on the size of the void, a small vent to allow good airflow.

3.1 MINIMUM ALLOWANCES

Ensure that the void has a minimum internal height of 420mm and the *Kaelo* unit is at least 73mm away from the internal walls.

If installing multiple Curved or Flush *Kaelos* into one void, ensure that the centre points of each hole are at least 200mm apart.

IMPORTANT

Different hole size required for each style of Kaelo:

3.2 HOLE SPECIFICATION: CURVED

A 155mm hole can be created using CNC or water jet cutting.

3.3 HOLE SPECIFICATION: FLUSH

Due to the required recess, the hole for a Flush Kaelo must be cut by fabricators only.

3.4 HOLE SPECIFICATION: UNDERMOUNT

A 125mm hole can be created using a CNC or water jet cutting.

3.5 MARINE APPLICATIONS

If designing *Kaelo* into a yacht or marine environment:

- Install in-cabin and keep dry
- Keep away from chlorinated water, such as hot tubs and swimming pools
- *Kaelo* is designed to withstand 15 volts DC for short periods of time, as is common when many vessels start up

4. VENTILATION

We advise that a small vent is included in all installations, to allow sufficient airflow to the *Kaelo* base unit. Be aware if the ambient air around the *Kaelo* is above 32 degrees, the unit will not function as intended and shutdown.

If ventilation isn't possible, there are larger voids which don't require it, see below for details. If ventilation isn't possible on a smaller void, we recommended not to install *Kaelo* in that location.

- Ⓐ Ventilation is not required when *Kaelo* is installed into a void with a volume larger than 0.13m^3
- Ⓑ A small vent is required when *Kaelo* is installed into a void with a volume smaller than 0.13m^3

INSTALL CONSIDERATIONS

- Ensure *Kaelo* is not installed in close proximity to appliances that generate heat
- Ensure the base and sides of the *Kaelo* are not obstructed
- Ensure the base and sides of the *Kaelo* are not located in an area where they are vulnerable to damage or obstruction

4.1 EXAMPLE A - NON-VENTED INSTALL

Voids that are greater than 0.13m^3 do not require ventilation when a single *Kaelo* is installed.

If installing multiple *Kaelos* into a single void, ensure that the void allows for at least 0.128m^3 per *Kaelo*, otherwise ventilation is required.

This example would not require ventilation: $0.2\text{m} \times 0.8\text{m} \times 0.8\text{m} = 0.128\text{m}^3$

4.2 EXAMPLE B - VENTED INSTALL

Voids that are less than 0.13m^3 require a small vent into another void or into ambient air to allow for better airflow circulation.

The vent should have an area of at least 9000mm^2 and is usually best placed in the back panel.

This example would require a vent: $0.3\text{m} \times 0.3\text{m} \times 0.8\text{m} = 0.072\text{m}^3$

5. INSTALL: CURVED

Important:

Don't place silicone between the Crown and **Kaelo unit magnets**, as the Crown must be in direct contact with the magnets to function
Wipe away any excess silicone, ensuring the Crown is not scratched

5.1 CUT HOLE & VENT

- For hole cutting - see section 3.2
- For ventilation - see section 4.2

5.2 INSERT KAELO

- Carefully lift the *Kaelo* from the box using two hands and lower slowly into hole. Push down evenly to secure the unit in place
- There is a black circular seal on the base unit top where the Crown will sit, don't remove this

5.3 SEAL SURFACE & CROWN

- Before locating the Crown onto the *Kaelo* unit, place a line of silicone where the base unit meets the worktop surface, and where Crown edge will sit

5.4 ATTACH CROWN

- Quickly, locate the Crown onto the *Kaelo* and push down evenly
- Wipe away any excess silicone, taking care not to scratch the Crown surface

5.5 INSERT RUBBER MAT

- Align *Kaelo* logo with the user area, and lower the rubber mat inside the chamber
- Remove the protective film from the Crown

5.6 POWER UP

- The power pack generates a small amount of heat, so place as far away from the *Kaelo* as the installation space and cable allows
- Ensure the power pack is not near a surface that might be subject to liquids. Best practice is to mount onto a surrounding wall
- Plug in power supply to mains and *Kaelo*. See section 8 (page 20) for testing instructions

6. INSTALL: FLUSH

Important:

Don't place silicone between the Crown and **Kaelo unit magnets**, as the Crown must be in direct contact with the magnets to function
Wipe away any excess silicone, ensuring the Crown is not scratched

6.1 CUT HOLE, RECESS & VENT

- For hole and recess cutting - see section 3.3
- For ventilation - see section 4.2

6.2 ALIGN & LOWER

- Carefully lift the *Kaelo* from the box using two hands and lower slowly into hole
- Carefully press down evenly on top until *Kaelo* unit lip is flush with recess
- There is a black circular seal on the base unit where the Crown will sit, don't remove this

6.3 SEAL SURFACE & CROWN

- Before locating the Crown onto the *Kaelo*, place a bead of silicone at the edge of the *Kaelo* unit lip

6.4 ATTACH CROWN

- Locate the Crown onto the *Kaelo*, push down evenly to attach the magnets
- Wipe away any excess silicone, taking care not to scratch the Crown surface

6.5 INSERT RUBBER MAT

- Align *Kaelo* logo with the user area, and lower the rubber mat inside the chamber
- Remove the protective film from the Crown

6.6 POWER UP

- The power pack generates a small amount of heat, so place as far away from the *Kaelo* as the installation space and cable allows
- Ensure the power pack is not near a surface that might be subject to liquids. Best practice is to mount onto a surrounding wall
- Plug in power supply to mains and *Kaelo*. See section 8 (page 20) for testing instructions

7. INSTALL: UNDERMOUNT

Align Locking Ring with worktop hole,
see reference 7.2 (page 19)

Locking Ring attached
to Alignment Template

Worktop hole

PLEASE NOTE

- The Undermount *Kaelo* is attached to the underside of the worktop, unlike the Flush & Curved styles where the Crown sits on top
- For ease of centering the *Kaelo* with the hole, where possible we recommend fixing the Locking Ring to the underside of the worktop during fabrication, before worktop installation

UNDERMOUNT LID

- With the Undermount, it's possible for a lid to be fabricated and placed in the hole, above the *Kaelo* Crown
- This needs to be specific to the worktop and material being used, and must have a method of removal before placing on the *Kaelo* (please discuss with your fabricator or designer)
- We recommend the lid diameter as 121mm
- The lid must have a protective base, such as rubber pads or feet, to prevent scratching the Crown surface

7.1 CUT HOLE, RECESS & VENT

- For hole cutting - see section 3.4
- For recess instructions - see section 3.3
- For vented installations - see section 4.2

7. INSTALL: UNDERMOUNT

7.2 ATTACH LOCKING RING TO WORK SURFACE

- Locking Ring comes with the Alignment Template already attached
- Place epoxy on top side of Locking Ring (or use screws for wooden surfaces)
- Use Alignment Template to centre with worktop hole, see diagram on page 16
- Hold Locking Ring in place using G-clamps, being careful not to damage worktop or Locking Ring feet
- Once epoxy is dry (or screws are in place) remove the Alignment Template and discard

7.3 ATTACH CROWN

- Attach Crown and Gasket to *Kaelo* using screws provided
- Lightly lubricate the top side of the gasket with washing up liquid

7.4 TWIST KAELO ONTO LOCKING RING

- Carefully lift *Kaelo* towards the Locking Ring and screw **anti-clockwise** until it's securely in place
- Looking down the hole, there should be no gap between the bottom of the surface and top of *Kaelo*

7.5 INSERT RUBBER MAT

- Align *Kaelo* logo with the user area, and lower the rubber mat inside the chamber
- Remove the protective film from the Crown

7.6 POWER UP

- The power pack generates a small amount of heat, so place as far away from the *Kaelo* as the installation space and cable allows
- Ensure the power pack is not near a surface that might be subject to liquids. Best practice is to mount onto a surrounding wall
- Plug in power supply to mains and *Kaelo*. See section 8 (page 20) for testing instructions

8. POWER UP & TEST

8.1 POWER UP & ENJOY

- Once the *Kaelo* detects power, the lights will flash once. To turn the *Kaelo* on, simply tap once on the Crown
- For full User Guide instructions, head to: kaelo.co.uk/userguide or scan the below QR code to watch our how-to video:

8.2 TESTING KAELO

- Once *Kaelo* is installed, please perform the following tests to ensure optimal performance:
- Check the *Kaelo* is secure by applying pressure into the chamber
- Tap once on the Crown to turn on
- Tap the Crown 3 times, wait until it flashes, then tap repeatedly to check the lights change colour
- Hold your finger down on the Crown. Check that the lights change from off, to red, to blue then white
- Touch the base of the chamber after 3 minutes to check the *Kaelo* is cold
- To turn off, touch and hold the Crown for 2 seconds until the lights turn off

8.3 TROUBLESHOOT

- If the *Kaelo* is not operating properly, switch it off and on at the switch. On most occasions, the error can be detected by the red flashes. For more information, head to: kaelo.co.uk/care
- If the problem persists, get in touch: (+44)20 7870 1115
- Quote the unique serial code when getting in touch. This be found at the base of the chamber, underneath the mat, and on the side of the base unit
- Each *Kaelo* unit has a 2-year warranty, this can be activated online at: kaelo.co.uk/activate

9. SPECIFICATIONS

Adapter Input Voltage	100 to 240V AC, 2.5A, 50-60Hz
Kaelo Input Voltage	12 volts
Max Power Usage	85 watts
Max 12v DC Amps	7.5 amps
Auto Switch Off	After 2 hours Tap within the last hour to extend Auto Switch Off by an extra hour
Ambient Temp. Limit	10 to 32°C / 50 to 90°F <i>Kaelo will automatically switch off if the temperature is above 32°C / 90°F</i>

10. TRANSPORT & HANDLING

Please only install a *Kaelo* into a fixed surface or unit that will not be moved. If the surface or unit must be moved, please return the *Kaelo* to its original packaging and install once the surface/unit is in its final location and position.

Damages to the appliance, as a result of transporting while installed are not covered under the *Kaelo* warranty.

KAELO

**Kaelo installation is usually simple,
but if you have any questions, we'll always be happy to help:**
